

# 321

## 250-300°F (121-149°C) High T<sub>g</sub> Epoxy Resin System

### Typical applications

General aviation  
Aerospace  
Industrial  
Sporting goods

### Out life

21 days at 70°F (21°C)

### Shelf life

3 months at 40°F (4°C)  
6 months at 0°F (-18°C)

### Description

321 is a 250°F (121°C) to 300°F (149°C) cure, toughened, high T<sub>g</sub>, controlled flow epoxy resin system. Versatile processing and excellent mechanical properties make 321 suitable for general aviation, aerospace, sporting goods and industrial markets. FAA approved (AGATE) design allowable database is available for certain material combinations.

### Benefits/features

- High dry and wet T<sub>g</sub>
- Excellent mechanical properties
- B-basis design allowable database
- Moderate tack
- Good toughness
- Controlled flow

### Application

The high T<sub>g</sub> and excellent mechanical properties make 321 an ideal product for the general aviation, aerospace and other markets where products are required to retain their mechanical properties under demanding temperatures.

321 can be supplied with most commercially available fibers (carbon, quartz, aramid, S-glass, E-glass, etc.) in both woven form (designated as NB) and unidirectional tape (designated as NCT).

Woven fabrics are available in standard commercial widths up to 60 inches (1.5 m). Unitape widths up to 39 inches (1 m) are available in standard fiber weights ranging from 70-300 gsm (0.014-0.060 psf).

### Variants

- 321-1: Increased tack
- 321LS: Metal mesh reinforced adhesive

### Recommended processing conditions

321 can be cured at temperatures from 250°F - 300°F (121°C - 149°C) depending on part size and complexity. Low, medium and high pressure molding techniques may be used for curing. Recommended cure cycle is 50 psi (345 kPa); 3°F (1.7°C)/min ramp to 275°F (135°C); hold for 60 minutes, cool to <140°F (60°C). Post curing at 325 (163°C) is possible if higher T<sub>g</sub> is required.

## Neat resin [values are average and do not constitute a specification]

Property	Value
Gel time @ 275°F (135°C), minutes	5 – 7
Specific gravity	1.22
T <sub>g</sub> (DMA, E'), °C (°F)	150 (300)

## Mechanical data [values are average and do not constitute a specification]

34-700 Uni carbon, 36%RC, autoclave cured, 60 minutes at 275°F, 80psi, normalized to 60%FV

Property	Test method	RT
0° Tensile strength, ksi (MPa)	ASTM D3039	304 (2090)
