Let's Build Something!

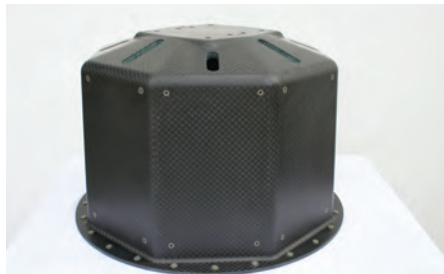

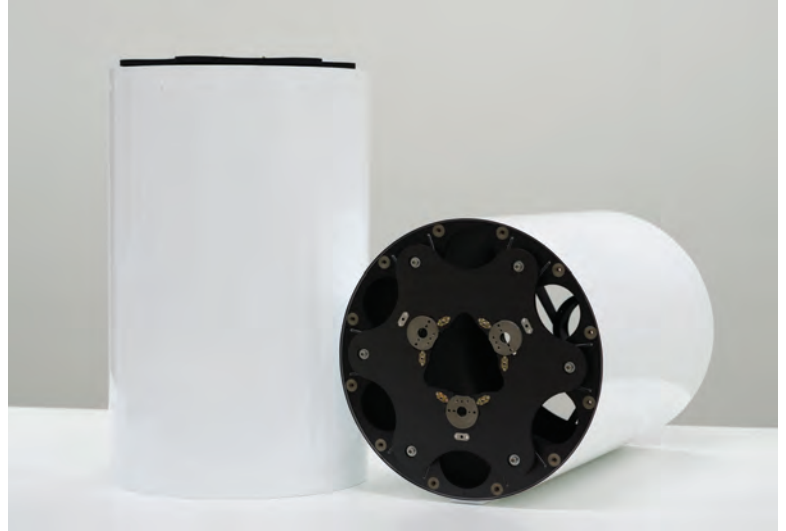

We're Rock West Composites, a global leader in the composites industry. Our mission is to make the magic of composite technologies accessible to the world. As one of the first companies to commodify composites technology, we are customer-centric and solutions-focused – and offer everything from a selection of off-the-shelf products to full-service custom composite products that we engineer, develop, prototype, manufacture, and test.

Put the magic of composites to work for you.

Why Rock West Composites?

Using an easy-to-buy approach, we help our customers create great products by offering them off-the-shelf products, rapid development, and globally-competitive production. Whether you need a tube for a DIY project or a custom component with strict engineering requirements, we've got you covered.

We service virtually all markets including aerospace, defense, science, research, energy, unmanned vehicles, communications, medical devices, industrial applications and more. And while our roots are in aerospace, we know how to maximize results with a commercial cost sensibility.

Off-the-Shelf Products

Meeting your composite needs with over 3000 products in stock!

Build complex projects with strict engineering requirements using our off-the-shelf selections. Most products can be shipped within one day. Our pricing is competitive, and we can accommodate orders of all sizes.

- Tubes, rods, round, shaped
- Plates and panels
- Materials and tools
- Connectors and accessories
- Machining services

Custom Development

Solving unique problems through dedicated engineering.

From simple tubing to complex, highly engineered structures, we have the experience and engineering background needed to design and manufacture the most efficient solution for your unique application.

- Product development
- Design, engineering, analysis
- Tooling
- Prototypes
- Production, assembly
- Testing, qualification

Production Solutions

Experts in small to large, short to long term manufacturing runs.

By continually investing in new equipment and capabilities we provide the best composite production solutions possible to our customers. With commercial pricing, we can accommodate production of all types.

- Roll wrapping
- Filament winding
- Resin infusion
- RTM/VRTM
- Bladder molding
- Oven cure/vacuum bag
- Compression molding

How We Help You Stay Competitive

- We are composites engineering experts
- Founded by entrepreneurs from the aerospace industry
- Solve problems efficiently and cost effectively
- Find creative and innovative solutions
- Maintain transparency throughout the process
- Build partnerships with our customers

Our Qualifications

- AS9100D and ISO 9001:2015 certified
- DCAA-approved rates
- Competitive burdened labor rates
- 5S methodology
- 3rd party risk assessment approval
- 3rd party online reviews

Our Locations

Our headquarters are in San Diego, California, home to our corporate and engineering offices and manufacturing facilities. In Salt Lake City, Utah, we have a large manufacturing plant with engineering offices as well as e-commerce operations. Additionally, we have a manufacturing plant in Baja California, Mexico about 30 minutes from our corporate office.

San Diego

Corporate headquarters, product development, composites engineering, prototyping, testing, manufacturing

7625 Panasonic Way
